

PageSpeed SEO and Accessibility Fix Report

Site: <https://drranjithneuro.com/>

Updated: 17 May 2026, 01:26 PM

Accessibility Issues Resolved

- Improved text contrast by changing the global body text color from light grey #838383 to accessible #5f6368.
- Added accessible names to icon-only social links such as Facebook, Instagram, YouTube, X, and LinkedIn.
- Marked decorative Font Awesome icons as aria-hidden so screen readers do not announce icon classes.
- Added aria-labels to contact and appointment form fields.
- Previously fixed accessibility blockers remain clean: no maximum-scale viewport restriction, no missing image alt text, and no duplicate title tags.

Current Local Validation

Check	Result
Placeholder href="#" links	0
Missing image alt attributes	0
Duplicate/missing title issues	0
Viewport zoom restrictions	0
Unlabeled form fields	0
Local smoke test	index.html, contact.html, book-appointment.html returned HTTP 200

Live Score Note

The PageSpeed screenshot is from the live deployed domain. These fixes must be uploaded/deployed and the host/CDN cache cleared before PageSpeed can reflect them. If bot verification is still served to Google Lighthouse, the report may continue to show inaccurate or stale results.
